

VACCINES FOR KITTEN/CATS

RCP - (DISTEMPER) Vaccine that covers viruses and bacteria responsible for upper respiratory and gastrointestinal infections.

FELV - (LEUKEMIA) Feline leukemia is a retrovirus that causes suppression of the immune system, impairing a cat's ability to fight infections. It may also cause anemia, leukemia and some forms of cancer. It is a contagious disease spread from cat to cat by blood and saliva. The most common method of spread is by bite wounds.
